## Applications

- Nucleic acids (DNA/RNA) concentration
- HPLC, PCR, gel extraction, isolation, purification and concentration from solid phase extraction to solvent removal
- Combinatorial chemistry

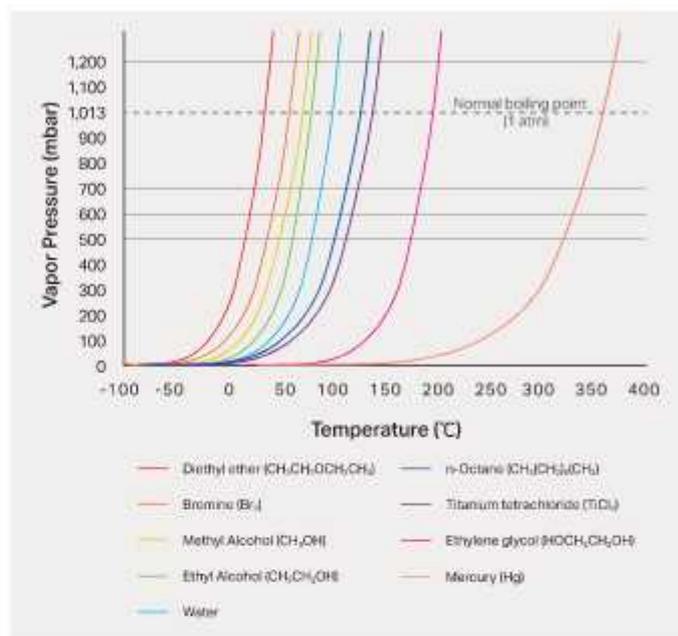

## Centrifugal Vacuum Concentration

The solvent removal is an essential process for the wide range of applications in genomics, proteomics, biochemistry, pharmaceutical study and analytical chemistry.

The energy as heat is applied during solvent removal process, so that the liquid is evaporated to gas.

The boiling point of solvent can be decreased by applying vacuum pressure, which enables liquid vaporization at lower temperature than its boiling temperature. Also decreased boiling points and centrifugal force give benefit to minimize boiling and bumping of solvents, and prevent cross contamination and sample loss.

HyperVac generates heat up to 80°C, accommodating with vacuum pump and cold traps provides enhanced evaporation of solvent and improved sample purity.

## Applications

- Pharmaceutical study and production
- Research and production of vaccine and antidote
- Drying and preservation of plants, food and etc.
- Archaeological study

## Freeze Drying

The freeze drying, also known as lyophilization is a dehydration technique through sublimation process, the shift from the solid directly into the gas without passing through liquid phase. The materials must be frozen completely to remain as solid state during sublimation process. Additionally, applying vacuum enables to lower the pressure below triple point, which to avoid the liquid phase. The freeze drying technique is used in various applications in food industry, pharmaceutical and biotechnology field and other industrial areas. HyperCOOL system allows complete removal of residual moisture.

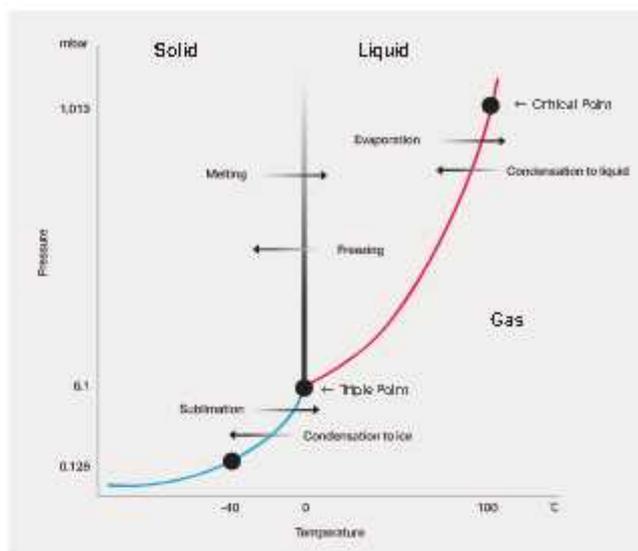

### Freezing Point Depression

$$\Delta T = iK_f m$$

$\Delta T$  = Decrease in solution freezing point

$K_f$  = Freezing point depression constant for the solvent

$m$  = Molality

Fully Teflon coated condenser chamber and top plate provides consistent resistance against aggressive solvents and acids.

Hot-gas de-ice function of chamber heating makes fast ice removal.

Diverse sample containers can be used both in the chamber plate and flasks through manifold tree with 3/4 inch rubber valves.

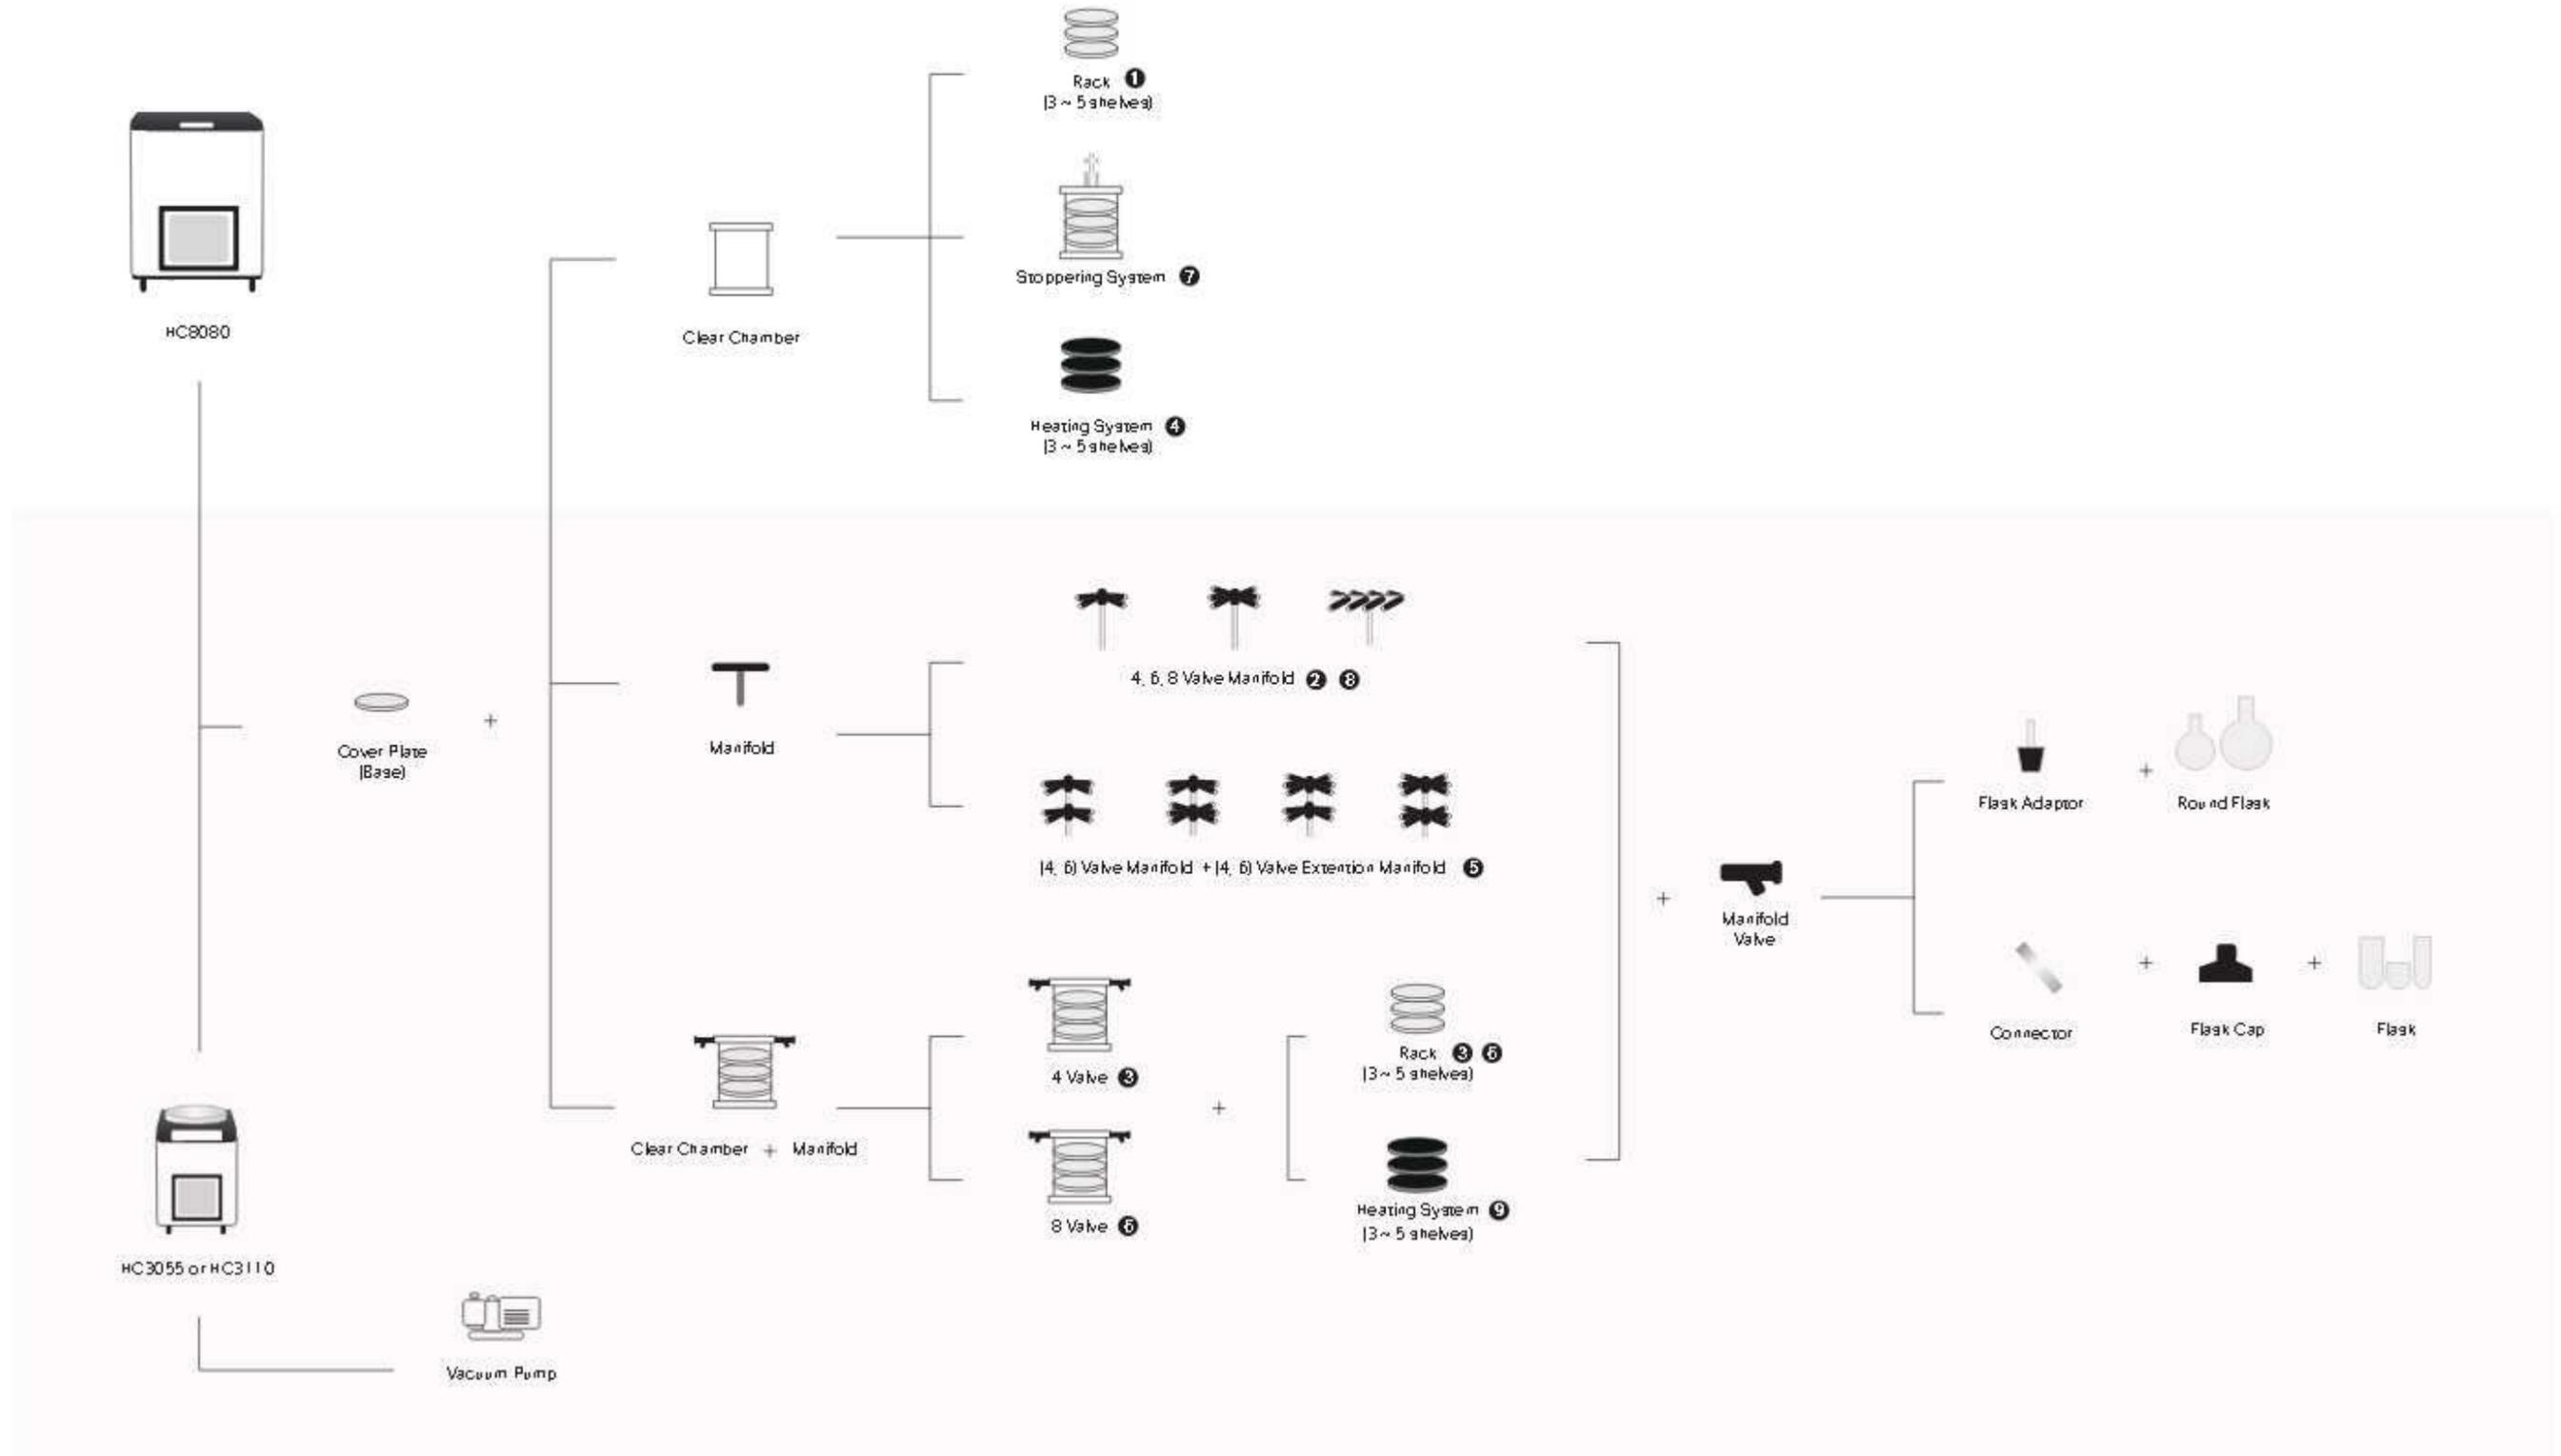

Front installed condenser pins are easily de-dusted by detaching a magnet door.

A screw capped drainage in the front body for easy and quick cleaning.
